Make	Model	Year	Install	CAN	Lights	Type	BCM	Configuration
<b>DL-GM7</b> Chevrolet	Cruze Limited Flip-Key MT	2016	Type 2	Type A	Park / Auto Type A	Key	CCPS	Feature Option None

**Firmware:** This installation uses **BLADE-AL(DL)-GM7**, flash module and update the controller firmware before installing.

**Installation:** **Type 2** installation sources CAN data from the blue connector of the BCM, requiring use of the '**A**'-connector, the connector marked 'B' is not used.

**Lights:** **Type A** lights (standard parking lights) are provided, as are **Type H** (hazard lights), both incorporated in the harness for visual display of runtime status/diagnostics. Re-pinning of the CM I/O (gray) harness is required, regardless of which type you choose to use, both options have been provided for your selection. If you choose hazards you will also need to configure the selected POC for one of the following hazard control options, **Hazard1** (POC option #30 (momentary) or **Hazard2** (POC option #23 (latching)), depending on hazard switch operation.

**Locks:** The CM lock connector is not required for this installation type. Secure as needed.

**Manual transmission equipped vehicles:** **Type 2** installation requires additional wiring and a resistor to provide a clutch bypass. Extend the CM7 negative start output (red/black) to the vehicle clutch switch and connect to the yellow wire in position #2, through a 180 Ohm resistor, as illustrated.
