Make	Model	Year	Install	BCM	Lights	Locks	POC 1	I/O Changes
DL-NI4 Nissan	Versa STD Key MT	2012-19	Type 1	ADKP	**Park / Auto** NI-LOCK	DATA	Hazard1/2	**Green White/Blue**

Installation **Type 1** requires **BLADE-AL(DL)-NI4**, flash module and update the controller firmware before beginning the installation.

I/O Changes: Each vehicle in this installation group have different configuration requirements for proper handling of ACC and START circuit handling. Please ensure that the appropriate changes have been made before testing.
The required, controller specific, changes are listed below.

CM900S/900AS I/O Changes:

Optional Hazard Light Control:
NI-LOCK harness *green*/*white* is pre-wired for hazards, connect harness wire to the controller POC1 (*green*/*white*), additional configuration required. Vehicles equipped with a MOMENTARY activation switch require that POC1 be configured for **Hazard light** (POC option #30), if the switch is LATCHING type you will use **Hazard light 2** (POC option #23).

Clutch Bypass: M/T equipped Versa requires additional wiring and configuration to provide a clutch signal bypass. Select a POC and change its feature option setting to Option 2 (2nd START). Use the configured POC to activate a relay to provide +12V during start, to the *brown* wire at the clutch switch.

Auto-Light OFF:
NI-LOCK harness *orange* is pre-wired for Auto-light shut off, if the vehicle is equipped with auto-lights connect CM REARM output (*orange*) to *orange* wire in harness.

D

NI-LOCK harness configuration: Configure Double Pulse Unlock **(feature 1-04, option 2)** Vehicle lock functions are handled through data, additional harness configuration is not required.

FTI-NSK1: Installation and Configuration Notes

A CUTS REQUIRED - INSULATE AFTER CUTTING

B REQUIRED CONNECTION - USE JUMPER IF NO IMMOBILIZER

C CONNECT AS ILLUSTRATED

D CONNECT AS ILLUSTRATED

E CONNECT AS ILLUSTRATED
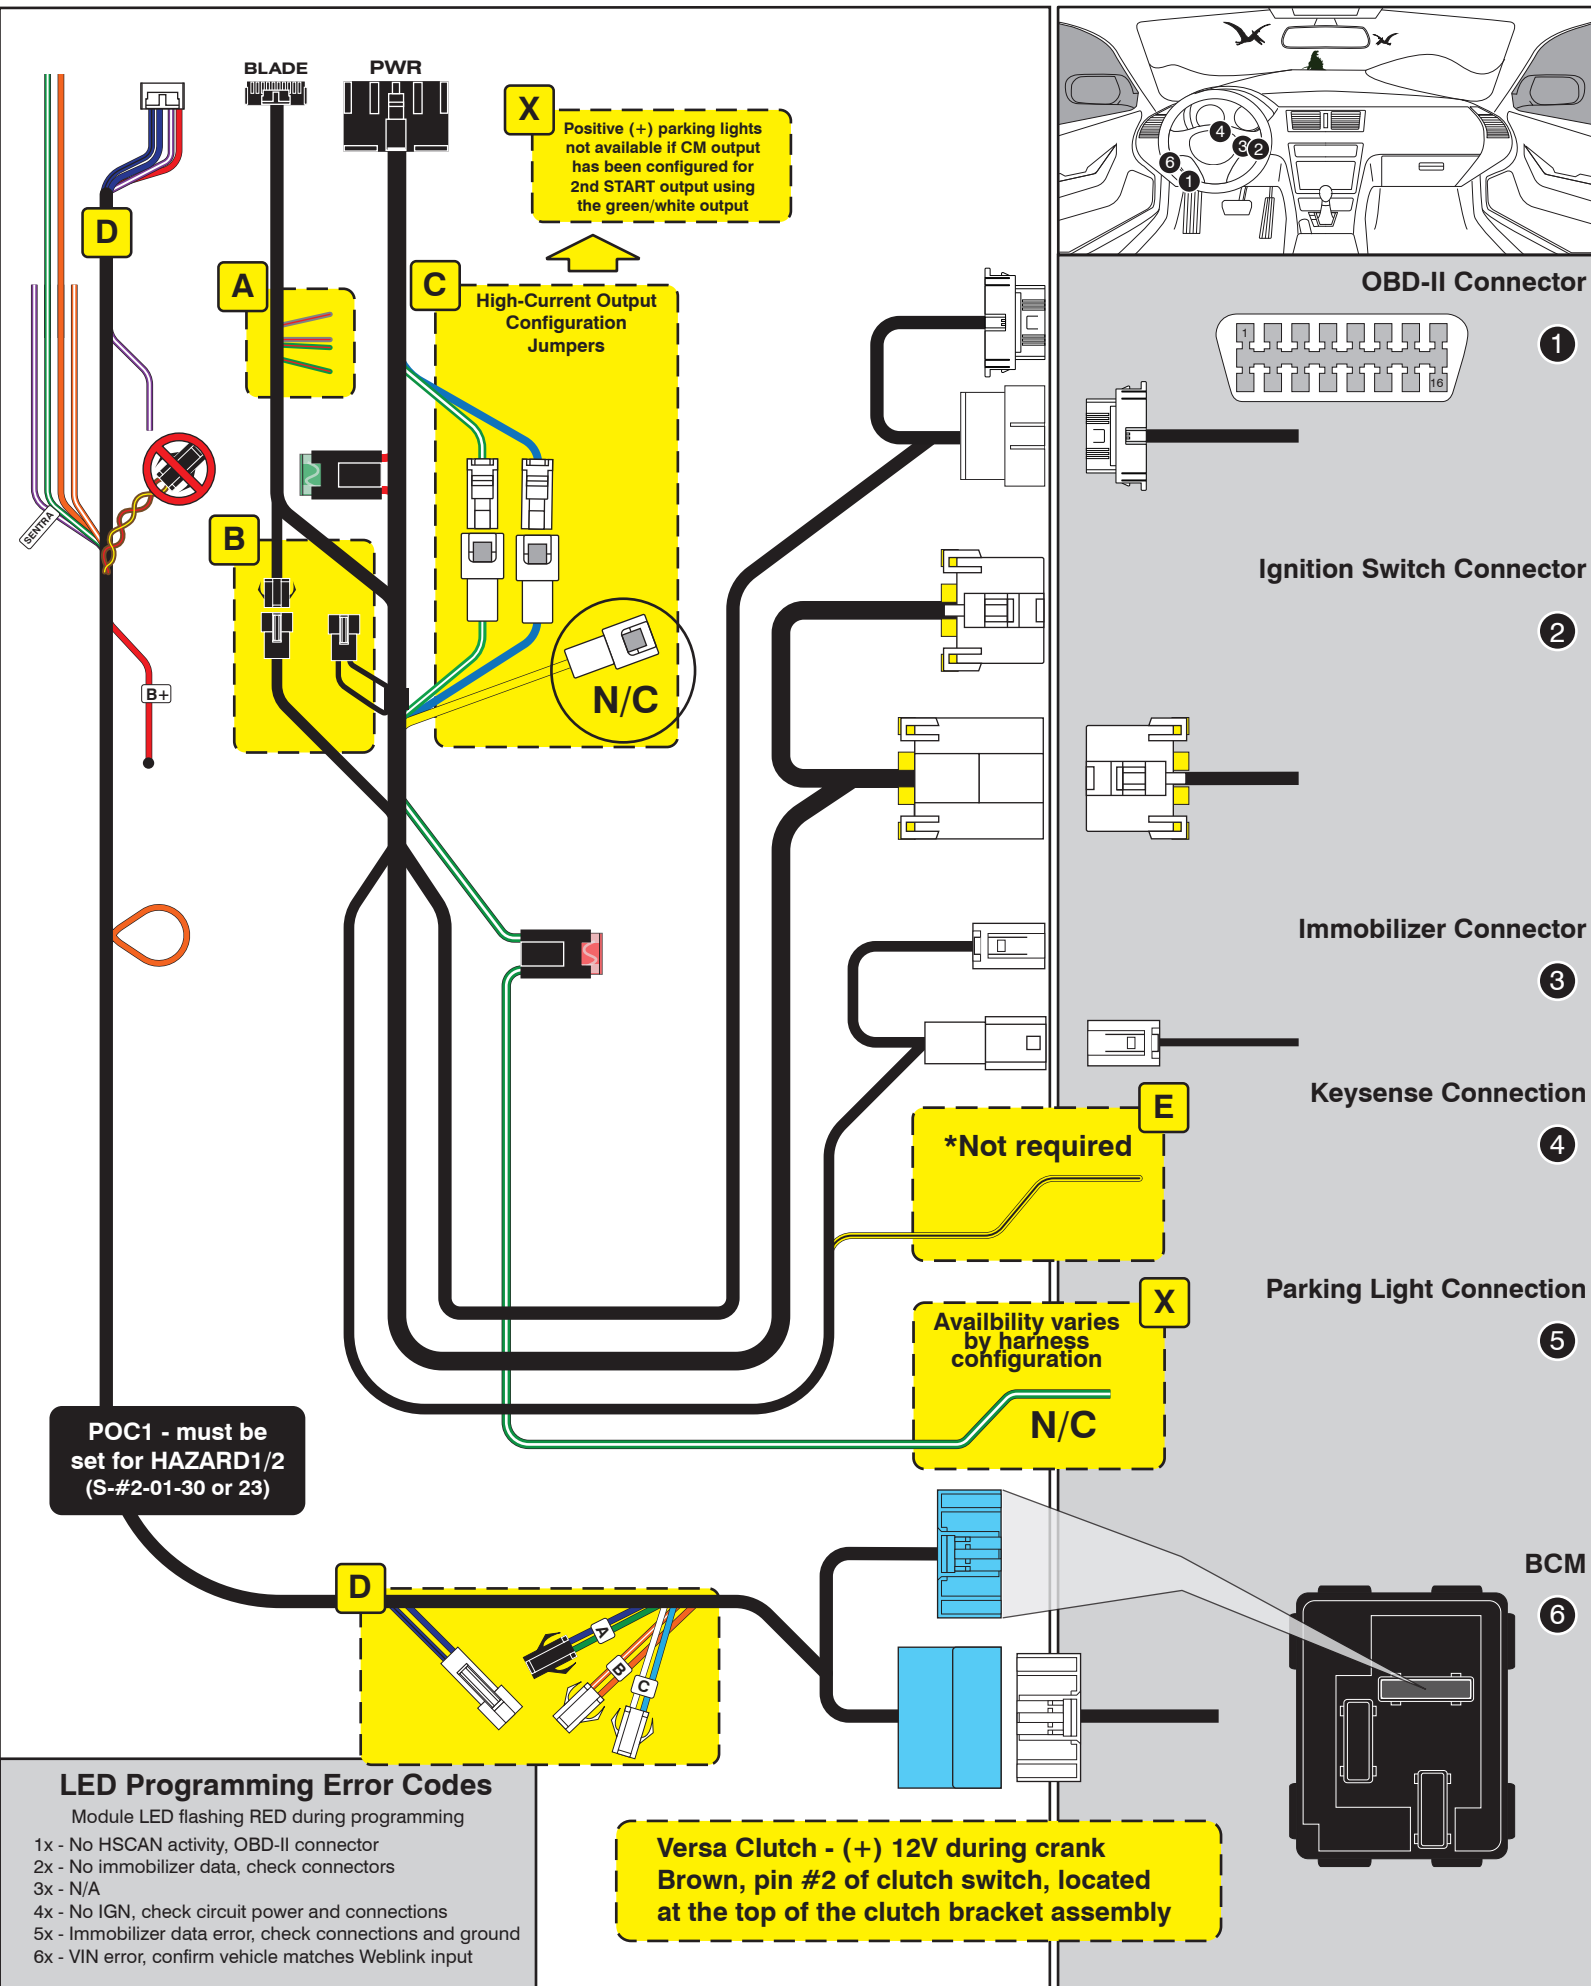

• FT-DAS Required for manual transmission.
• BOTH Red & Red/White MUST be connected with high current application.

LED Programming Error Codes

Module LED flashing RED during programming

1x - No HSCAN activity, OBD-II connector
2x - No immobilizer data, check connectors
3x - N/A
4x - No IGN, check circuit power and connections
5x - Immobilizer data error, check connections and ground
6x - VIN error, confirm vehicle matches Weblink input

Versa Clutch - (+) 12V during crank
Brown, pin #2 of clutch switch, located
at the top of the clutch bracket assembly

Patent No. US 8,856,780 CA 2759622

COM-BLADE-AL(DL)-NI4-EN   Doc. No.: ##75307##   20210414

CARTRIDGE INSTALLATION

1 Slide cartridge into unit. Notice button under LED.

2 Ready for Module Programming Procedure.

MODULE PROGRAMMING PROCEDURE

NOTE

I   To complete this procedure, use one regular key or one valet key.

OR

II   When programming, all key fobs must be located at least 10 feet away from the vehicle.
1 Insert key into ignition.

2 Turn key to ON position.

ON

3 Wait, LED will turn solid BLUE for 2 seconds.

4 OFF   Turn key to OFF position.

5 Module Programming Procedure completed.
